

# Question 1

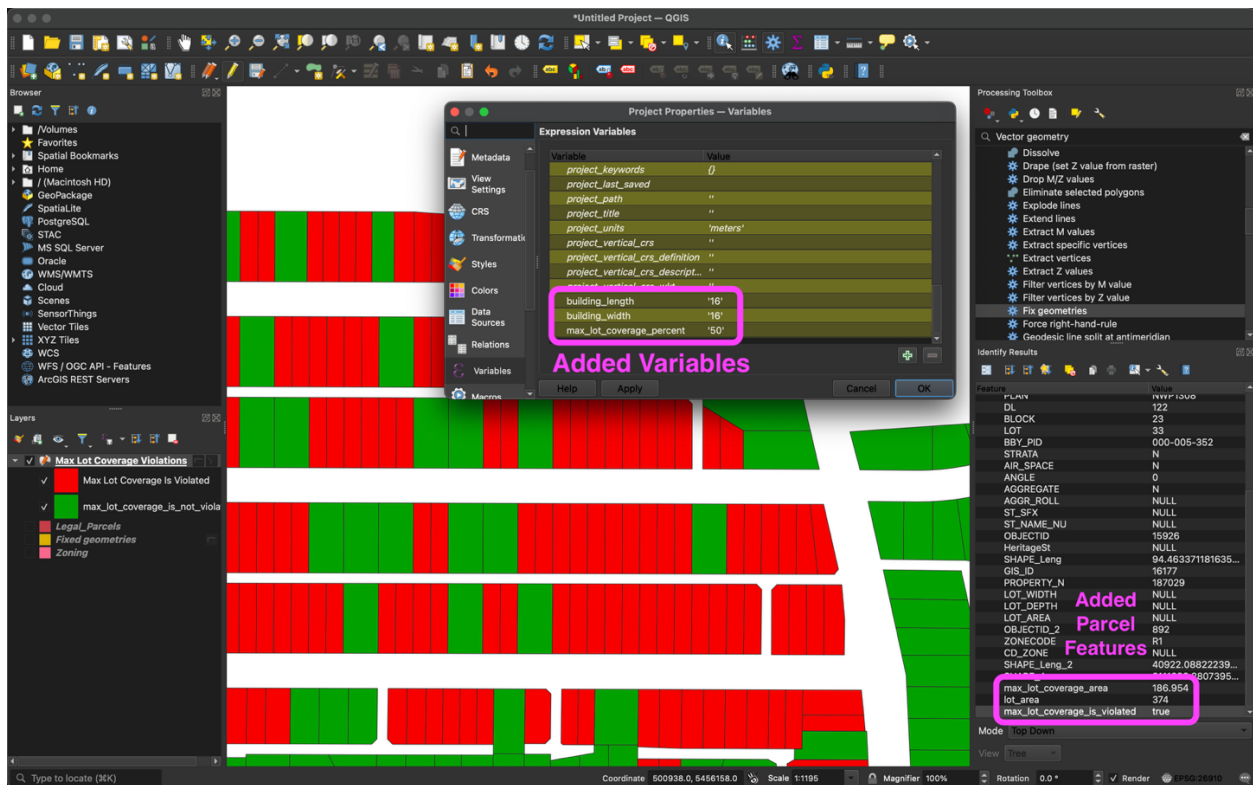

## Objective

The objective is to obtain the building plans or dimensions of buildings of interest that can be used for testing GIS solutions when determining rule violations.

## Attempts

Right now, we have a GIS layer for Burnaby that shows max\_lot\_coverage violations in red. This GIS layer depends on building\_width and building\_length variables as input. We hardcoded 16 m for each arbitrarily.

## Evidence

## Diagnosis

We don't have the access to the building plans or dimensions of any buildings of interest that you may have. If you have any buildings of interest, we could use those for building\_width and building\_length while building our solution instead of hardcoding arbitrary values.

## Proposed Next Steps

Provide us with the building plans or dimensions of any buildings of interest you may have.

## Decision Ask

Do you have any buildings of interest with plans or dimensions that can be shared so we can avoid hardcoding arbitrary building dimensions? The complete building plans would be preferred.
